AUTOMATION OF THE VEHICLE REQUISITION AND MANAGEMENT PROCESS IN THE PORTUGUESE ARMY

This automation initiative aims to create a centralized database for monitoring the location of units as well as counting and checking the operational status of vehicles, complemented by an intuitive-to-use calendar interface for the automated management of vehicle requests.

1 - MAP

The interactive map feature gives users a dynamic view of the distribution of units and vehicles, allowing for detailed, real-time analysis.

2 - DATABASE

The Vehicle Inventory is a centralized tool that records, in detail, all the vehicles assigned to units, including specifications, capacities and respective assignments.

3 - CALENDAR

The calendar feature simplifies the vehicle requisition process, allowing each unit to submit requests easily and on time.
